Inspection was done on 06.08.2012 and following deficiencies were observed:

1. No separate application for consent to establish and consent to operate for plot no.-10 and plot no.-11 as the addressee unit has submitted a common application for consent to operate for both the units at plot no-10 and plot no 11.

2. The tray cover not provided with filter press and no sludge holding tanks were there. The filter press found in defunct condition so, provide a proper sludge de-watering facility to ensure proper sludge collection.

3. Water meters for STP inlet, flushing and horticulture not provided to know the quantum of water reused after treatment.

4. Solar water heating system provided but not connected making its purpose defeated.

5. No well-grown trees provided as part of green buffer zone to reduce ambient air pollutants and noise levels.

6. The fresh water balance chart is required after putting water meters at all strategic points to calculate exact water consumption and distribution after treatment.

A SCN Notice for Closure were issued on dated 04.09.2012 for the same. Reply to take corrective measures has been submitted by the unit and a separate application for plot no-11 has been received with request that common application may be treated for the other plot no 10.
